## **DETAILED ACTION**

### ***Response to Arguments***

Applicant's arguments with respect to claims 1 and 2 have been considered but are moot in view of the new ground(s) of rejection.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ohmura in view of the admitted prior art (figure 1).

1. Regarding claim 1, Ohmura discloses a circular ring 12 on one end; the circular ring having two opposite sides of the perimeter extended downwards to form a vertical section (see orientation in fig 2); the vertical section having a distal end 15 extended outwards and downwards and bent inwards to become narrower so as to form an inclined conical section 13 which has a horizontal plane 16 at one end; the horizontal planes of two sides being symmetrical and joined juxtaposed to form a flat and conical fastening section; the circular ring 12 further having a lower end 17 extending

downwards to form an arrow shaped fastening section 18 opposite the conical fastening section.

2. Ohmura does not disclose the vertical sections mounted on the sides of the guide ring.

3. It would have been obvious to one of ordinary skill in the art at the time the invention was made to move the vertical sections of Ohmura to the sides of the guide ring, since it is obvious to rearrange parts of an invention (see *In Re Japikse*, 86 USPQ 70).

Regarding claim 2, Ohmura discloses the inclined conical section 13 has a vertical surface to form a surface contact with the fishing line (at bottom portion of element 12).

### ***Conclusion***

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of

Art Unit: 3643

the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.
